

Peripheral Strip

For expansion joints

Description

Peripheral strip is used to form expansion joints in the perimeter between screeds and walls. One side of the strip is auto-adhesive, facilitating an easy adhesion to the surface to be applied. In addition, due to the physical properties of its material, it is used as a sound-insulation band.

Characteristics

Product	Peripheral Strip
Properties	
Material	closed-cell polyethylene
Width (mm)	150
Thickness (mm)	8
Length (m)	60
